

GHSP's DFMA Transformation

Company Overview

Established 1924

Headquarters Holland, MI

Employees 1,400

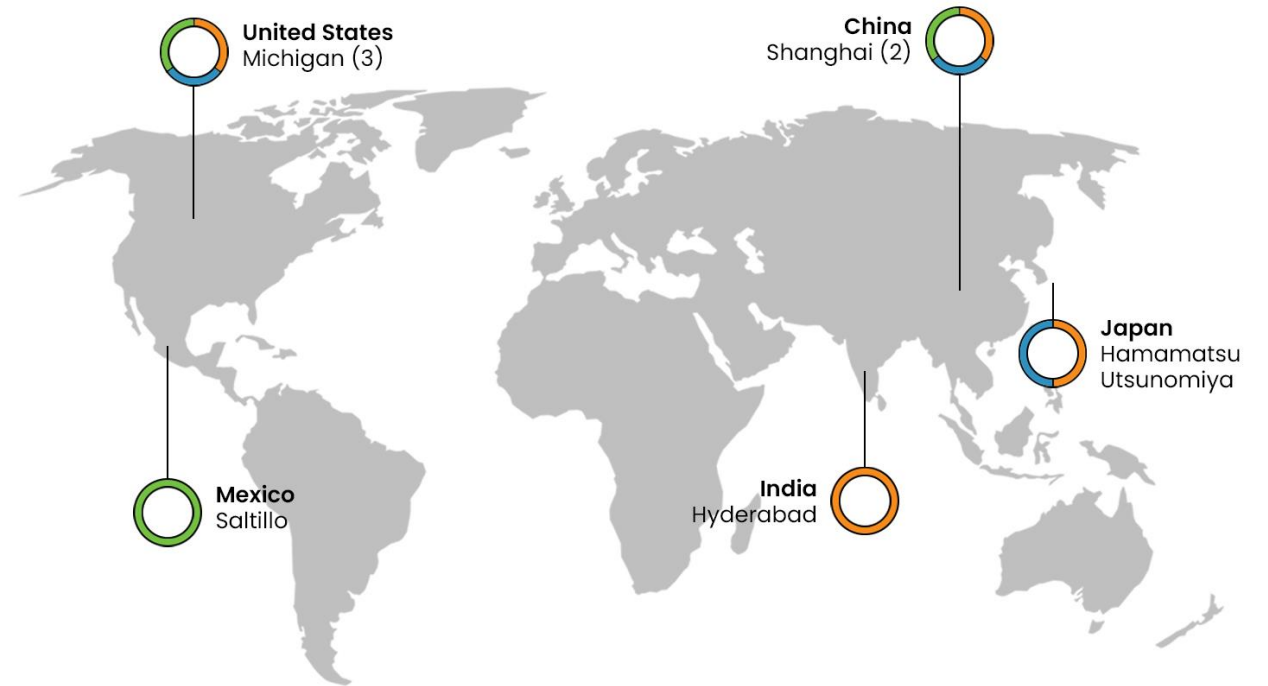

Annual Sales \$300M

Ownership Privately owned within JSJ Group

Customers, Partners

Global Presence

- 01 Sales
- 02 Engineering
- 03 Manufacturing

Core Products (Automotive)

Shift-by-wire systems

- All embodiments across multiple global OEMs
- Flexible core platforms
- Powertrain and multifunction controls

Conventional shifters

- Common core components
- Decoration & lighting

Controllers/ECUs

- Shift by wire
- Trailer brake & lighting
- Active dampening & ride height

E-pumps

- Cooling & Lubricating across all powertrains & applications
- Oil, Water, Glycol, Dielectric

Actuators

- Axle disconnect, Sway Bar, Transmission/Park Lock
- Vibration Control & Enhancement

Shift-by-Wire

“When it comes to automatic shifters, it’s proceeded with caution”

“The rotary shifter on the 2017 Ford Fusion represents an **innovation** that actually **improves safety.**”

Automotive News

“GM gets e-shifter right with 2018 GMC Terrain”

“The 2018 GMC Terrain may elevate General Motors into a **design leader** for the next generation of automatic transmission shifters.”

Electronic Pump Applications

- External Electric Oil Pumps
- Internal Electric Oil Pumps
- Hydraulic Clutch Actuator
- Internal Electric Motor
- External Electric Motor
- Electric Water Pumps
- Dual Electric Pumps
- High Voltage 1KW

Integrated Embedded Controls

- LIN, CAN and PWM Communication
- Speed, Torque and Pressure Control
- Signal Processing
- Diagnostics
- Models

Compact eMachines

- In-Slot, Segmented, Optimized Power and Density Stator
- Sintered, Bonded and Sensor (Less) Rotor
- Die Cast, Molded and Stator-Only Housing

Multi-function, Fluid Controls

- Pressure, Flow and Power Capacity
- Temperature
- Response
- Stability
- Cooling
- Pressure Control

Control Module Applications

- Trailer Brake
- Trailer Lighting
- Active Dampening
- Standard Interface Board (SIB)
- Vibration Emulation/Cancellation

Software Capabilities

- AutoSAR
- ISO 26262 - ASIL A/B
- GM Cybersecurity
- Diagnostics / DTC
- FOTA Capable
- Control Algorithm Development

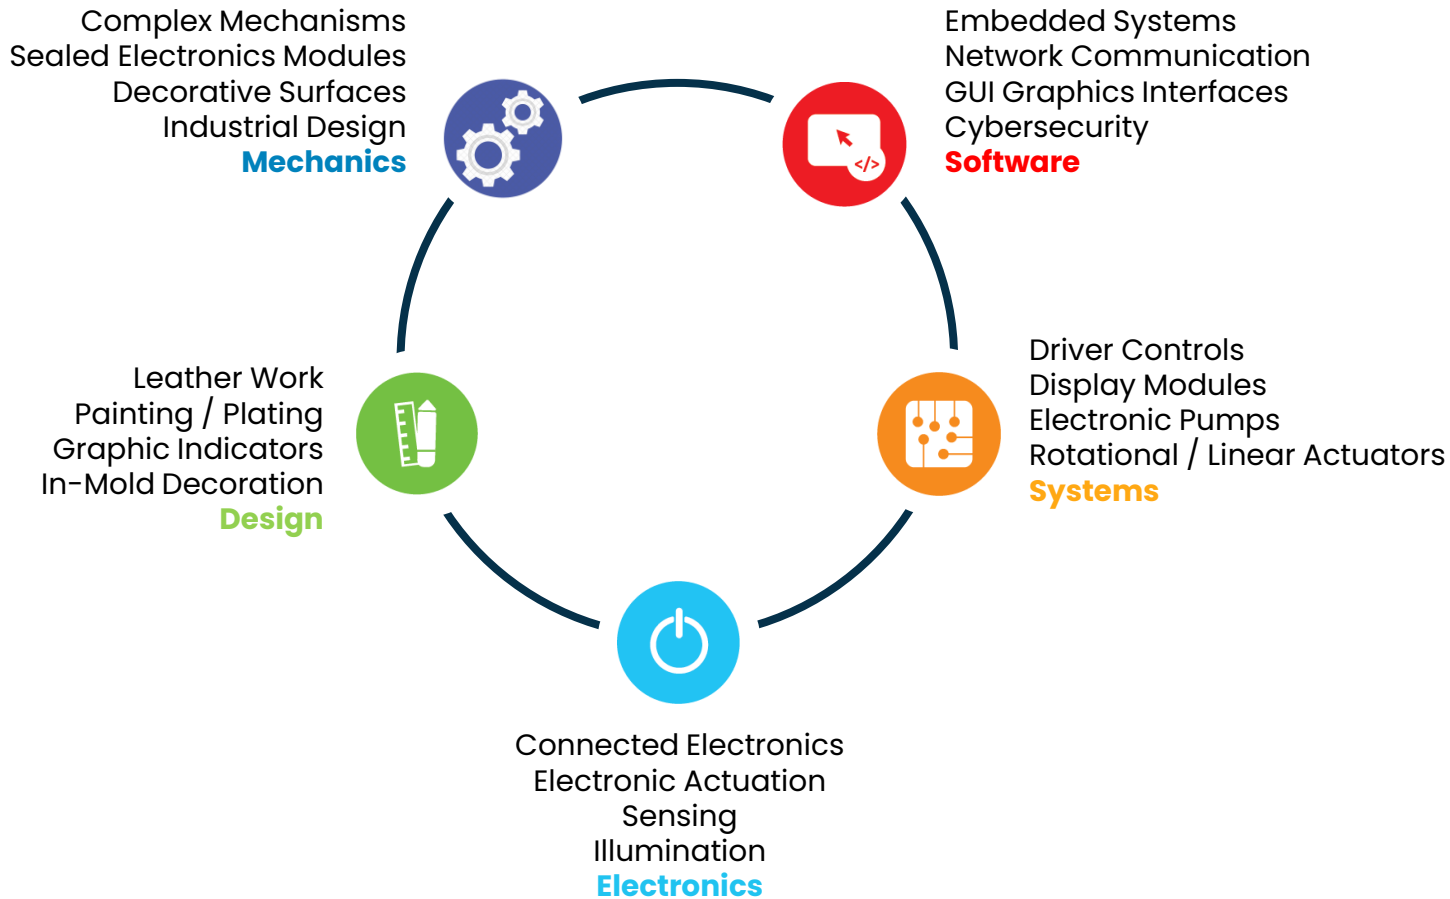

Sensors

- Body Accelerometers
- Ride Height
- Wheel Hub Accelerometers
- Tri-Axis Hall Effect Position

Communication

- CAN / CAN-FD
- LIN
- PWM

Core Competencies

Vertical Integration

- Software, hardware and mechanical design
- Full performance and validation testing
- SMT manufacturing – PCBAs
- ESD-controlled clean room production
- Wire harness manufacturing
- Laser welding
- Plastic injection molding
- Stator over-molding
- Motor winding
- Leather stitching and wrapping – Knobs, Boots
- Complex assembly – Controllers, Pumps

In the Beginning...

- Before 2016, DFMA was a single task in our Product Development Process.
- It usually consisted of 2 people (Mechanical Engineer and Process Engineer) who would review the design on a screen.

Progression

- Excel form created to give some sort of guidance.

| Design for Manufacturing and Assembly Checklist / Review | | | | | | | | | | | | | | | | | | | | | | | |

Solution!

- 2016 a team of 5 GHSP employees traveled to BDI
- Spent 3 days using the DFMA software, allowing BDI to showcase its capabilities
- Returned to GHSP and purchased the software immediately

Success Stories: GM SIB's

Original Design:

- 1) Main PCBA with a ZIF Connector
- 2) LED PCBA with a ZIF Connector
- 3) FFC to connect the 2 PCBA's

Original Assembly Process:

- 1) Operator would install one end of FFC into Main PCBA
- 2) Then fish the FFC through a slot in a plastic housing, before placing the Main PCBA into the housing
- 3) Then connect the other end of the FFC, with very limited length of cable, into the LED PCBA
- 4) Last, place the LED PCBA into the housing

Success Stories: GM SIB's

Production Design:

- 1) Main PCBA with a Board-to-Board Connector
- 2) LED PCBA with a Board-to-Board Connector

Production Assembly Process:

- 1) Operator places Main PCBA into housing
- 2) Operator places LED PCBA into housing, automatically making connection between PCBAs

Success Stories: GM SIB's

Benefits:

- 1) Removes 1 component from BOM
- 2) Reduces cycle time
- 3) Reduces machine complexity
- 4) Easier confirmation of connection, reducing potential quality/warranty issues
- 5) Reduces ergonomics issues not having to pinch the FFC between thumb and fore finger

Success Stories: GM SIB's

Success Stories: Ford IT50

Original Design:

- 1) GHSP to make Rotor, which consist of:
 - a) Core
 - b) 4 Magnets
 - i. Requires Adhesive and Activator
 - c) Shaft
 - d) Plastic Overmold

Original Assembly Process:

- 1) Place Core into fixture
- 2) Press Shaft into Core
- 3) Apply Activator to Magnets
- 4) Apply Adhesive to Core
- 5) Install Magnets onto Core, allowing proper dry time (~60 seconds)
- 6) Overmold the assembly

Success Stories: Ford IT50

Production Design:

- 1) Purchase Rotor from Supplier

Production Assembly Process:

- 1) Operator (or machine) loads Rotor into fixture

Benefits:

- 1) Removes 5 components from BOM
- 2) Reduces cycle time
- 3) Removes a whole assembly station (less Capital investment)

Success Stories: Ford 1T50

Success Stories: Stellantis TCSM

Original Design:

1) 4 Individual Light Pipes

Original Assembly Process:

1) Operator loads each individual Light Pipe into housing

Success Stories: Stellantis TCSM

Production Design:

- 1) 1 Light Pipe

Production Assembly Process:

- 1) Operator loads Light Pipe into housing

Benefits:

- 1) Reduces cycle time
- 2) Reduces cost

Success Stories: Stellantis TCSM

Original Design:

1) 8 Screws

Original Assembly Process:

1) Operator (or machine) drives 8 Screws

Success Stories: Stellantis TCSM

Production Design:

- 1) 4 Screws

Production Assembly Process:

- 1) Operator (or machine) drives 4 Screws

Benefits:

- 1) Reduces cycle time
- 2) Reduces cost

Success Stories: Stellantis TCSM

Original Design:

- 1) 7 Individual Light Pipes
- 2) 7 Individual Button Plungers

Original Assembly Process:

- 1) Operator loads Light Pipe into Plunger
- 2) Operator loads Plunger/Light Pipe assembly into housing

Success Stories: Stellantis TCSM

Production Design:

- 1) 7 2-Shot Light Pipe/Button Plunger

Production Assembly Process:

- 1) Operator loads Light Pipe/Button Plunger into the housing

Benefits:

- 1) Removes 7 components from BOM
- 2) Reduces storage space at the assembly station for each component
- 3) Reduces cycle time
- 4) Reduces machine complexity
- 5) Reduces number of Injection Molding Tools needed

Success Stories: Stellantis TCSM

Success Stories: Stellantis Pursuit

Original Design:

- 1) 1 Lever Wire Harness

Original Assembly Process:

- 1) Operator installs Wire Harness Connector 1
- 2) Operator routes Wire Harness
- 3) Operator installs Wire Harness Connector 2

Success Stories: Stellantis Pursuit

Production Design:

- 1) No Lever Wire Harness

Production Assembly Process:

- 1) Was able to get the Customer to add a jumper to their Vehicle Wire Harness and have them make the connection.

Benefits:

- 1) Removes 1 components from BOM
- 2) Reduces cost
- 3) Reduces cycle time
- 4) Reduces possible ergonomics issues

Success Stories: Metrics Page

- Adding a DFMA Metrics Page is valuable (thank you Kohler!)
 - We use Power BI on a SharePoint page
- Easy reference when questioned about the benefits of DFMA's
 - Especially when/if someone questions the worth of a group of people spending 2-3 days reviewing a product
- We like using Power BI because it is more interactive than Excel graphs/charts

Recommendations for New Users

- 1) 3 days can be a lot, especially when your products are similar to each other
 - a) It's ok to do 1-2 day events, but at least do a review
 - b) Helps to have the BOM created and CAD files loaded prior to the start

- 2) Online DFMA's
 - a) Ok to do, but limit each meetings to 2 hours
 - i. 2-hour meeting in morning and another 2-hour meeting in the afternoon
 - ii. 2-hour meeting the morning (or afternoon) for 2-3 consecutive days
 - b) Get back to in person DFMA's as soon as you can

Recommendations for New Users

3) Include an Exploded View Drawing/PowerPoint of the product with the meeting invite (or an email prior)

a) Gives attendee a chance to understand/grasp what they will be reviewing prior the meeting

4) Hold Follow Up/Open Issues meetings

a) Prioritize the ideas

b) Assign the ideas to people

c) Hold people accountable

Recommendations for New Users

5) It may take more than 1 DFMA

a) Depending on the length of the product development phase, you may need to hold 2 or even 3 DFMA's

b) These can be shorter ½ to 1-day events

Thank You

- Nate Taylor
- taylornt@ghsp.com
